# OIL FILTERS

Quality and performance cannot be evaluated easily, novice users tend to select oil filters by price alone.

Since oil filters have insidious yet crucial effects on engine performance and integrity — choose **Vesrah** quality oil filters.

**Vesrah** spin-on oil filters and regular replacement filters are manufactured by OE factories to meet or to exceed the OEM specifications from a selection of materials, designs and performance requirements.

**FILTER MATERIALS:** Filter material is a composite of paper pulp, other organic fibres and resins, which are processed to produce extra thickness and density to provide high filtration yield.

**DESIGN:** Filter materials are fluted to their maximum or to the OE required numbers; the higher the number of fluting, the higher the filtration efficiency. Although this process incurs the most cost, this is the most crucial impact on filter quality. Outer casing construction of spin-on filters, for example, are designed to OE thickness standards, so that **Vesrah** filters withstand oil pressure, vibrations and other physical assaults.

† Vesrah filters are not supplied for European and American models • Models highlighted in Bold & Italic are off-road machines

Vesrah clutch plate sets are manufactured by OE factories to OEM standards and specifications and are fitted to over 90% of all motorcycles made in Japan. Each clutch disc is made from high density, high friction material which reduces expansion and fading.

Vesrah clutch plates are made of Paper-Kevlar composite for selected new Japanese motorcycles and of the traditional wood cork material for all other applications. The traditional cork plates give an excellent price/performance combination.

The composite plate is one of the most advanced high-tech materials for wet/multiplate clutch systems, as the following test results show:

	Vesrah	Other Products
Dynamic Friction Coefficient	0.22μ	0.18μ
Swelling after 90 mins in oil at 200°C/392°F	0.025mm	0.040mm

Tested according to OEM clutch manufacturer

Vesrah clutches transmit power more efficiently (high friction coefficient) and give you full on/off control of power transmission (small swelling in oil at high temperatures).

Vesrah have the most comprehensive application for Japanese motorcycles with wet/multiplate clutch systems: most bikes with gear power transmission and with manual clutch.

The majority of scooters on the road are equipped with speed changers (CVT – Continuous Variable Transmissions). The CVT is essentially composed by an anterior semi-pulley group, a posterior semi-pulley group and a driving belt. The CVT rollers are characterised for geometry and dimension.

Acting on the rollers' geometry and dimension, the CVT performances can be modified considerably. Adige rollers are the result of great experience acquired in over 40 years of activity in the two-wheeler segment and they are available in a standard version and in a "High Ratio System" one, both covered by a composite material with carbon fibre base.

The "High Ratio System" rollers, patented worldwide, are characterized by a revolutionary profile and innovative features that still make them stand out from the competition.

The ground and calibrated carbon fibre coating together with a shape-retaining antioxidant alloy structure assure highest precision, maximum durability and excellent technical features.

Using our "High Ratio System" rollers reduces the rate of roller wear and so the consequent speed reduction that quickly arises with the appearance of roller wear. The "High Ratio System" roller profile allows a 6-7% increase of the maximum speed ratio and a 2-3% reduction of the minimum speed ratio for better performance.
